Fracture | MedlinePlus
A clavicle fracture is a break in the collarbone, one of the main bones in the shoulder. This type of fracture is fairly common—accounting for about 5 percent of all adult fractures. Most clavicle fractures occur when a fall onto the shoulder or an outstretched arm puts enough pressure on the bone that it snaps or breaks.

Fracture Risk Calculator - Garvan
A fracture is a break, usually in a bone. If the broken bone punctures the skin, it is called an open or compound fracture. Fractures commonly happen because of car accidents, falls, or sports injuries. Other causes are low bone density and osteoporosis, which cause weakening of the bones. Overuse can cause stress fractures, which are very small cracks in the bone.

Broken Bone (Fracture) Symptoms, Signs & Causes

A broken bone is called a fracture. In order for a fracture to heal, the bones must be held in the correct position and protected. Soon after a fracture occurs, the body acts to protect the injured area, and forms a protective blood clot and callus around the fracture.
