Fundamentals of radar signal processing mark a. richards. Resolution is the ability of a radar to resolve (distingui sh) between two or more targets on the same bearing but at different ranges Range cell (or) Resolution cell is smallest range increment the radar is capable of detecting. If the radar has a range resolution of 50 yards and a total range of 60000 yards there are 60000/50=1200 range cells.
