Seeley?Stephens?Tate: © The McGraw?Hill Companies, 2004

That's One Large Intestine!That's One Large Intestine !!! At 3 or 4 inches around (about 7 to 10 centimeters), the large intestine is fatter than the small intestine and it's almost the last stop on the digestive tract. Like the small intestine, it is packed into the body, and would measure 5 feet (about 1.5 meters) long if you spread it out.

Welcome to 1DocStop

The excitatory and inhibitory stimuli act as stop and go signals to direct stomach emptying into the duodenum for mixing with digestive enzymes. This stop and go processing continues as long as food remains in the stomach, which can be up to four hours for a full meal.
