Phage Genetics: The transfer of genetic elements from one bacterium to another by a bacteriophage is termed as transduction. Transduction can be generalized or specialized. The generalized transduction is seen in lytic cycle where segments of bacterial DNA are packaged inside phage capsid instead of phage DNA.

hematopoietic malignancy caused by a variety of mutations, including genes encoding the cohesin complex.

### Genetics Sridhar Rao

The genetic material of bacteria and plasmids is DNA. The two essential functions of genetic material are replication and expression. Structure of DNA The DNA molecule is composed of two chains of nucleotides wound around each other in the form of “ double helix ” . Double-stranded DNA is helical, and the two strands in the helix are antiparallel.
