In mathematics, an elliptic curve is a smooth, projective, algebraic curve of genus one, on which
is a specified point O . An elliptic curve is defined over a field K and describes points in K^2 , the
Cartesian product of K with itself. If the field's characteristic is different from 2 and 3, then
can be described as a plane algebraic curve which, after a linear change of ...

Riemann zeta function. The Riemann zeta function is defined for complex s with real part greater
than 1 by the absolutely convergent infinite series $\zeta(s) = \sum_{n=1}^{\infty} \frac{1}{n^s}$. Leonhard Euler already considered
series in the 1730s for real values of s , in conjunction with his solution to the Basel problem.
proved that it equals the Euler product $\zeta(s) = \prod_p \frac{1}{1 - p^{-s}}$ where the infinite product extends over all prime ...

These 2 registry studies reported low revision rates in both the bi- and tri-compartmental groups. The bi-compartmental group had a revision rate of 1.5 % and 2.8 %, respectively, at 2 to 4 years follow-up and 1.5 % and 1.6 %, respectively, at 2 years follow-up. No significant differences in overall revision rates between the 2 treatment groups were reported by either study.
