diagnosis of adnexial masses is difficult due to its extended spectrum and therefore evaluation and management is challenging. Giant ovarian cystadenomas are rarely observed today because of improved imaging techniques. In most cases, USG examination can reveal a complex adnexal mass, however large ovarian cysts require an evaluation of abdomen.

Giant mucinous cystadenoma:
a case report

Mucinous cystadenoma is a benign ovarian tumor. It is reported to occur in middle-aged women. It is rare among adolescents [7] or in association with pregnancy [8]. On gross appearance, mucinous tumors are characterised by cysts of variable sizes without surface invasion. Only 10% of primary mucinous cystadenoma

distortion of the pelvic anatomy.

GIANT MUCINOUS OVARIAN CYSTADENOMA - A CASE REPORT

...

Giant benign tumours of the ovary are rare in the modern world due to the improved technologies and general awareness. They are known to cause pressure symptoms to the surrounding structures. Though they appear frighteningly large, they are amenable to surgical debulking with good results in survival and post operative recovery. Here we would like to present a case where the patient could not

accounts for 15% of all ovarian tumors and, when diagnosed, 80% are benign, 10% limitrophe and 10% malignant.

A massive ovarian mucinous cystadenoma: a case report
Giant ovarian cysts are rarely described in the literature, owing to the availability of advanced imaging technologies in developed countries leading to early treatment. In resource-limited settings, various factors lead to late presentation. We present a case of a 48-year-old black African woman with a giant mucinous cystadenoma who presented to a tertiary

ciliated epithelial cells with an apical mucin and basal nuclei.

Giant benign mucinous cystadenoma: A case report
The final pathologic diagnosis was a mucinous cystadenoma of the appendix. A mucocele of the appendix is an obstructive dilatation of the appendix caused by intraluminal accumulation of mucoid material. It may be caused by 1 of 4 processes: retention cyst, mucosal hyperplasia, mucinous cystadenoma, or mucinous cystadenocarcinoma.
