Trends Transforming the Global Landscape  
Global warming also has an enormous impact with respect to melting glaciers and ice sheets. Higher global temperatures melt glaciers such as the one in Greenland, which flow into the oceans, adding to the amount of seawater. A large rise (on the order of several feet) in global sea levels poses many threats.

Globaltrends  
In the global water cycle, fresh water evaporates from the oceans, rains out over land and runs back into the sea. Global warming is expected to intensify this cycle, leading to an increase in river runoff (otherwise known as river discharge). The problem is direct measurements of discharge around the world's rivers are limited.
