6 Reviewing the evidence. Studies identified during literature searches (see chapter 5) need to be reviewed to identify the most appropriate data to help address the review questions, and to ensure that the guideline recommendations are based on the best available evidence. A systematic review process should be used that is explicit and transparent.

Grade System For Clinical Guidelines

GRADE is one of several different systems for grading clinical evidence and creating clinical practice guidelines based on this underlying evidence. How do these systems compare with each other? Atkins and colleagues, from the GRADE Working Group, compared six different systems. Twelve assessors independently evaluated each system on the basis of 12 criteria to assess the “sensibility” (overall usefulness) of the different approaches.

Grading Guide | UpToDate

The system classifies quality of evidence as high (grade A), moderate (grade B), or low (grade C) according to factors that include the study design, the consistency of the results, and the directness of the evidence.
