C S R Prabhu Grid And Cluster Computing

Grid Computing. Grid computing refers to a network of same or different types of computers whose target is to provide a environment where a task can be performed by multiple computers together on need basis. Each computer can work independently as well. Following are the important differences between Cluster Computing and Grid Computing.

Grid And Cluster Computing Prabhu

Part I of the book enables the student not only to understand the concepts involved in grid computing but also to build their own grids for specific applications. Similarly, as today supercomputers are being built using cluster computing architectures, Part II provides an insight into the basic principles involved in cluster computing and equips the readers with the knowledge to build their ...

Difference between Cluster Computing and Grid Computing

A Computer Cluster is a local network of two or more homogenous computers. A computation process on such a computer network i.e. cluster is called Cluster Computing. Grid Computing: Grid Computing can be defined as a network of homogenous or heterogenous computers working together over a long distance to perform a task that would rather be difficult for a single machine.
