Step-by-step solution: Step 1 of 8 (a)
Refer to the Figure A1.8 from the text book. Draw the linear graph of the Figure A1.8. Figure 1. Comment(0)
Step 2 of 8 The voltage source and control voltage are placed in tree and current source and control current goes in the co-tree.

Edition - William H ...

The force on a differential length of the line at the positive y location is $dF = dqE = \lambda dzE$. Thus the force per unit length acting on the line at positive y arising from the charge at negative y is $\lambda \int_{-y}^0 \frac{\lambda dz}{4\pi\epsilon_0 r^2} = \frac{\lambda^2}{4\pi\epsilon_0} \int_{-y}^0 \frac{dz}{(y+z)^2} = \frac{\lambda^2}{4\pi\epsilon_0} \left[\frac{1}{y+z} \right]_{-y}^0 = \frac{\lambda^2}{4\pi\epsilon_0} \left(\frac{1}{y} - \frac{1}{0} \right)$. This is not a finite value, indicating a problem with the model of point charges. In reality, charges are distributed in a volume, and the force per unit length is finite.
