*How to Replace Drum Brakes on Your Car*

*Master cylinders for drum and disc brakes are different. A master cylinder for disc brakes must take some of the fluid in the lines back when the brake pedal is released. This allows the caliper pistons to retract and allows brake pads to "float" off the rotors when the brakes are not applied. Without this feature, disc brakes would drag.*

*How To Change Drum Brakes | O'Reilly Auto Parts*

*Drum brakes use friction-lined brake shoes inside of a drum, as opposed to brake pads over a disc brake rotor. This design allows them to have a longer service life , as well as a lower cost of manufacturing than found with disc brakes - in exchange for the straight-ahead braking power and heat dissipation of a disc brake system.*

*How to Change Drum Brakes (In-depth, ultimate guide)*

*If the brake shoes are in tight contact with the inside of the drum, the brake adjuster screw may need to be shortened. The drum should slide freely over the shoes for removal. With the brake drum off, set it in a container and clean it.*
