Body Cavities. The cavities, or spaces, of the body contain the internal organs, or viscera. The two main cavities are called the ventral and dorsal cavities. The ventral is the larger cavity and is subdivided into two parts (thoracic and abdominopelvic cavities) by the diaphragm, a dome-shaped respiratory muscle.. Thoracic cavity

Anatomical Terminology | SEER Training

An anatomical plane is a hypothetical plane used to transect the body, in order to describe the location of structures or the direction of movements. In human and animal anatomy, three principal planes are used: The sagittal plane or lateral plane (longitudinal, anteroposterior) is a plane parallel to the sagittal suture. It divides the body into left and right.

The dead body of a human being is not a human body any longer -- or indeed any other kind of body, but rather, as it decomposes, an amalgam of many bodies. Human bodies, like any other material objects, are composed of matter and form; and it is the form of the human body , not the form of the matter of the human body, that is the human soul" [1]

MAN=BODY+SOUL: Aquinas's Arithmetic of Human Nature

The human body consists of the legs, the torso, the arms, the neck, and the head. An adult human body consists of about 100 trillion (10¹⁴) cells . The most commonly defined body systems in humans are the nervous , the cardiovascular , the digestive , the endocrine , the immune , the integumentary , the lymphatic , the musculoskeletal , the ...

The human brain controls nearly every aspect of the human body ranging from physiological functions to cognitive abilities. It functions by receiving and sending signals via neurons to different parts of the body. The human brain, just like most other mammals, has the same basic structure, but it is better developed than any other mammalian brain.
