Human Genetic Engineering – Probe Ministries

What is genetic engineering? Genetic engineering, sometimes called genetic modification, is the process of altering the DNA in an organism's genome. This may mean changing one base pair (A-T or C-G), deleting a whole region of DNA, or introducing an additional copy of a gene.

Gene therapy - Wikipedia

– Genetic engineering can also be used to move humans above and beyond their normal restraints. Genetically engineered humans can be made tougher, faster, stronger and smarter. This is, in effect, a laboratory-crafted evolution of the species. – Genetic engineering
