Duct System Design Page 1.5 energy is due to elevation above a reference datum and is often negligible in HVAC duct design systems. Consequently, the total pressure (or total energy) of air flowing in a duct system is generally equal to the sum of the static pressure and the velocity pressure. As an equation, this is written:

### The Fundamentals of Duct System Design

Air flow problems have plagued the HVAC industry for years. No matter how much money you spend on a highquality HVAC system, the equipment won't work at it- s best without properly designed and installed ductwork. Ducts that are not well designed result in discomfort, high energy costs, bad air quality, and increased noise levels.
