Birds in Flight - ID guide

Bird flight is the primary mode of locomotion used by most bird species in which birds take off and fly. Flight assists birds with feeding, breeding, avoiding predators, and migrating. Bird flight is one of the most complex forms of locomotion in the animal kingdom. Each facet of this type of motion, including hovering, taking off, and landing, involves many complex movements.

Identification Of Birds In Flight

Binoculars: Birding binoculars with a wide field of view are best for in-flight identification since they allow easier tracking of the bird as it moves across the sky or in and out of brush. The optics should also be properly coated to reduce sun glare. Spotting scopes are not typically useful for identifying birds in flight since the birds will move out of a scope's view more quickly and the ...

Wing-Tips - The Identification of Birds in Flight eBook ...

The only downside to watching birds in flight is that identification can be very difficult. Usually the birds fly past very quickly, the lighting is often terrible, and the only vocalizations are short call notes. Although it may seem daunting, the identification of birds in flight is an excellent opportunity to challenge any birder's skills.
