Keystone Package Testing has significant IEC 60068-2-64 random vibration testing experience. With four shakers and

lab full of support equipment, our schedule lead times are short. Our engineers provide guidance when problems arise, always assisting customers with finding potential solutions. We communicate throughout the test program and also assist in engineering test plans.

This standard may be used in conjunction with IEC 60068-2-47:2005, for testing packaged products. If the specimens are subjected to vibration of a combination of random and deterministic nature resulting from transportation or real life environments, for example in aircraft, space vehicles and for items in their transportation container, testing with pure random may not be sufficient.
