Herpetological Conservation & Biology Monograph 6

Their size, color, behavior, and unique adaptations vary depending on the species. Some, like the Fiji banded iguana, are bright green with white or light blue bands while others have dull colors. The most abundant and well-known type of iguana is the green iguana (*Iguana iguana*). Their average size is 6.6 feet, and they weigh up to 11 pounds.

Iguana iguana (Common Green Iguana) - Animal Diversity Web

The key stakeholders in conservation efforts for the area are the Dutch Caribbean Nature Alliance (DCNA), the Saba Conservation Foundation (SCF), the Montserrat National Trust (MNT) and the UK Overseas Territories Conservation Forum (UKOTCF), which, the research team hope, could take measures in order to protect the flagship insular iguana species, mainly against alien iguanas.

Iguanas : Biology and Conservation. (eBook, 2004 ...

The green iguana is a large lizard and is probably the largest species in the iguana family, though a few in the genus *Cyclura* may match or exceed it in weight. Adults typically grow to 1.2 to 1.7 m (3.9 to 5.6 ft) in length from head to tail. As in all iguanas, the tail comprises much of this length, and the snout-to-vent length of most green iguanas is 30 to 42 cm (12 to 17 in).
