Imidacloprid is very toxic to honeybees and other beneficial insects.  
The role, if any, of imidacloprid in Colony Collapse Disorder is not  
yet clear. Scientists have shown that plants grown in treated soil  
may have imidacloprid residues in their nectar and pollen at levels  
that are below those shown to cause effects on bees in laboratory  
experiments.

Emerging micro-pollutants (EMPs) in water have received much  
attention due to their potential hazards to human health and  
ecological security. Ferrate has been researched in recent years to  
remove both particulate and dissolved impurities (including EMPs)  
from water, and its promising performance has been attributed to the  
high oxidation capacity and coagulation functions.
