Try putting 1/2^n into the Sigma Calculator. Another Example. 14 + 116 + 164 + 1256 + ... = 13. Each term is a quarter of the previous one, and the sum equals 1/3. Of the 3 spaces (1, 2 and 3) only number 2 gets filled up, hence 1/3. (By the way, this one was worked out by Archimedes over 2200 years ago.) Converge. Let's add the terms one at a ...

To go from 3 to 2, multiply by 2/3, and to go from 2 to 4/3 again you must multiply by 2/3. So the geometric ratio r is 2/3 and since the sequence starts at 3, the initial term a=3. So using the infinite sum formula we get Note: r0 for an infinite sum to converge So as the sum of the infinite series is 9.

Infinite Series - MATH  
In mathematics, a square root of a number x is a number y such that y² = x; in other words, a number y whose square (the result of multiplying the number by itself, or y ? y) is x. For example, 4 and ?4 are square roots of 16, because 4² = (?4)² = 16.

In mathematics, a norm is a function from a vector space over the real or complex numbers to the nonnegative real numbers, that satisfies certain properties pertaining to scalability and additivity and takes the value zero only if the input vector is zero. A pseudonorm or seminorm satisfies the same properties, except that it may have a zero value for some nonzero vectors.
