For Windows users, you can still run the erl.exe shell, but it's recommended you instead use werl.exe, which can be found in your start menu (programs > Erlang). Werl is a windows-only implementation of the Erlang shell, having its own window with scrollbars and supporting command-line editing (like copy-pasting, which got to be a pain with

can be used, e.g. in the Erlang shell, or called from another module. Once compiled, a file foo.beam is produced for each foo.erl.

OTP at a High Level | Adopting Erlang - Introduction

I copied the bin path, went back to my hello-world folder, right-clicked start.cmd and chose for edit, and assumed replacing 5.7.5 (the Erlang version in the nitrogen package) with 5.9.2 would be enough, but then I noticed: there is also an erts-5.7.5 subfolder in the hello world project, which looks like it contains the whole erlang version...
