Originally, CFGs were used in the study of the human languages. Cellular automata are used in the field of biology, the most common example being John Conway's Game of Life. Some other examples which could be explained using automata theory in biology include mollusk and pine cones growth and pigmentation patterns.

To show the language is in NP, guess z , compute $f(z)$ deterministically in polynomial time, and test whether $f(z) = x$. When the guess of z is correct, we have $f^{-1}(x)$. Compare it with y , and accept the pair (x,y) if $z = y$.
