Ute Linz: Ion Beam Therapy (PDF) - ebook download - english
FIB induced X-rays (FIBIX) using a 30 keV Ga⁺ primary ion beam were collecting using EDS and WDS techniques for conducting samples, YBCO, Al, Cu, ZrB₂, and Mo. FIBIX X-ray cross sections

are largest for the light element materials, presumably due to momentum transfer from the primary ions to the target atoms and consistent with molecular orbital generation processes.

In ion beam therapy (IBT), organ motion requires special
procedures. Of general concern is the impact on the dose
distribution as a result of motion-related changes in the beam's
range. In addition, interplay effects can arise for scanned beam
application which cannot be addressed by the so-called margins to
increase the treated volume.
