useful, economic theory must give us a simplified picture of this reality. In microeconomics the usual way to simplify is to use partial equilibrium analysis. Partial equilibrium analysis assumes that we can look at part of the system in isolation, ignoring ...

The Economics of Isolation and Distance - NOPEC 28 (2)

Specifically, we find that when testing and isolation are not used, optimal policy delivers a welfare gain equivalent to a 0.6% permanent increase in consumption relative to no intervention. The welfare gain arises because under the optimal policy, the planner engineers a sharp recession that reduces aggregate output by about 40% for about 3 months.
