AJAX Introduction - W3Schools
Prompt Box: A prompt box is often used if you want the user to input a value before entering a page. When a prompt box pops up, the user will have to click either "OK" or "Cancel" to proceed after entering an input value. If the user clicks "OK" the box returns the input value. If the user clicks "Cancel" the box returns null. Syntax

JavaScript Function to Check\Uncheck all Checkboxes
AJAX (Asynchronous JavaScript and XML) is the art of exchanging data with a server, and updating parts of a web page – without reloading the whole page. Our earlier blog post already explained about form submission without page refresh, but it was done by using ajax, PHP and JQuery.

Professional JavaScript for Web Developers | Wiley
AJAX is a misleading name. AJAX applications might use XML to transport data, but it is equally common to transport data as plain text or JSON text. AJAX allows web pages to be updated asynchronously by exchanging data with a web server behind the scenes.
