Manual interceptor addition and logging feature. Logging interceptors can be selectively added to endpoints using the Apache CXF annotations @org.apache.cxf.interceptor.InInterceptors and @org.apache.cxf.interceptor.OutInterceptors.The same is achieved on client side by programmatically adding new instances of the logging interceptors to the client or the bus.

Drools - Documentation
By making mounting an explicit element of the API, the user is forced to think about the life-cycle of their mount. Note that code developed on JBoss AS in most cases will not have to worry about this, since the structural deployers in the deployer framework are responsible for creating/destroying the mount points of a deployment.

JBoss Cache User Guide
JBoss RESTful Web Services is a framework developed as a part of the JBoss Application Server. It implements the JAX-RS specifications. JAX-RS (Java API for RESTful Web Services) is a Java API that supports the creation of Representational State Transfer (REST) web services, using annotations.
