I have been using LCD screens (with the controllers) for my projects for a long time. Now I thought of learning how these screens actually work, the part before they go to the controllers. Well the idea came to my mind when I managed to scavenge an old working screen out of my old tablet. It has 60 pins and I managed to find a datasheet for it.

There are converters that convert 40-pin TTL to HDMI, but there's none for 60-pin that I could find. So then I'd have to find a way to convert down from 60-pin to 40-pin, which opens its own whole issue. Unless you have an idea, I'm pretty much resigning myself to just buying the screen that would work without conversion.
