Convert Fluorescent to LED Tubes [Replace Fluorescent ...

The fluorescent lights use a phosphor that emits UVA light instead of visible light, allowing the fluorescence effect (or glow) to be observed. Ultraviolet light can also be generated by some LED lights. Because the wavelength is set by the diode, these LED tube lights don't need the same colored coating as fluorescent lights. LED T8 FAQ's

Led Tube Lights Fluorescent Led

This is the oldest way of replacing fluorescent tubes with LED bulbs. This option allows the user to bypass the use of a ballast circuit as the wiring passes through the line voltage instead. Using this method, a commercial installation can have a high voltage of up to 277V, but, this can be dangerous if safety standards aren't followed to the letter.
