Courses - Teachers College, Columbia University

The course studies applications of regression to business forecasting and also examines alternative times series forecasting models, including exponential smoothing.

Download Ebook Linear Regression Models Columbia University

While the primary focus of the course is on regression models, some other statistical models will be studied as well, including cluster analysis, discriminant analysis, analysis of variance, and goodness-of-fit tests.

Bayesian methods are used to estimate linear regression models and generalized linear models. We also use Bayesian methods to estimate multilevel models, also known as linear mixed models. We

also estimate linear mixed models using non-Bayesian methods. We learn how to build, estimate, and evaluate these models and how to select the best one.
