Pros and Cons: Smart Electric Meters

In other French smart grid activity, ERDF's smart grid project Sogrid, based in the city of Toulouse, entered a new phase this month including a roll out pilot involving 1,000 metering points. The aim of the pilot is to test the reliability of the Sogrid communication system in real conditions in linking different devices on the network.

Smart Metering Intelligence

Smart metering is the near real-time measurement of energy consumption by means of a smart meter (a digital metering device). Smart metering is digitising our energy system and, as a consequence, laying the foundations for our future smart energy grid - the digital, interconnected national network that will provide us with a more modern, more efficient, and cleaner supply of power.
