A chairlift consists of numerous components to provide safe efficient transport. Terminology. Especially at American ski areas, chairlifts are referred to with a ski industry vernacular.A one-person lift is a "single", a two-person lift is a "double", a three-person lift a "triple", four-person lifts are "quads", and a six-person lift is a "six pack".

Chairlift - Wikipedia

Fatigue failures usually have flat profiles with very little topography and very little plastic deformation or necking. Many well-intentioned persons describing a fatigue failure for the first time will say the fastener "sheared," as a shear failure is generally understood to be a flat fracture.

Bolted joints are one of the most common elements in construction and machine design. They consist of fasteners that capture and join other parts, and are secured with the mating of screw threads.. There are two main types of bolted joint designs: tension joints and shear joints. In the tension joint, the bolt and clamped components of the joint are designed to transfer an applied tension load ...
