The objective of this work was the theoretical modeling of a construct based on teaching practice about the perception that pupils have of difficulties in problem solving (PS) in experimental sciences, specifically physics, to predict pupil performance in PS. The research was carried out with an incidental sample of second year of secondary education pupils, of 13 to 14 years in age. The ...

In statistics, an effect size is a number measuring the strength of the relationship between two variables in a population, or a sample-based estimate of that quantity. It can refer to the value of a statistic calculated from a sample of data, the value of a parameter for a hypothetical population, or to the equation that operationalizes how statistics or parameters lead to the effect size value.

Abstract: The main goal of super-resolution is to extract finer details (typically high frequency components) of a signal from low-resolution (or low frequency) measurements collected by an imaging system. The system's point spread function (PSF) poses fundamental limitations (for example, due to diffraction) on the achievable spatial resolution.
