Propeller - Wikipedia

Marine propulsion is the mechanism or system used to generate thrust to move a ship or boat across water. While paddles and sails are still used on some smaller boats, most modern ships are propelled by mechanical systems consisting of an electric motor or engine turning a propeller, or less frequently, in pump-jets, an impeller.

## Propulsion - Harbor Models - Scale Boat Kits and Accessories

Unlike other propulsor designers we have our own hydrodynamics research centre, equipped with two cavitation tunnels. In over 40 years of operation the centre has tested around 1,400 propellers and waterjet pumps to perfect and prove the design. Our propellers deliver good fuel economy, low vibration and noise levels and
