From 2007 to 2014, the preterm birth rate decreased from 10.41% to 9.54%, an absolute rate difference of -0.87% (Table). A U-shaped relationship between maternal age and preterm birth was present in both years with the lowest preterm birth rate occurring among women aged 25-29 years (Table) (Figure).

Maternal age and risk of low birth weight and premature ...
Background Approximately 15 million babies were born preterm worldwide in 2010 and in England in 2014 there were 52 249 preterm births. Preterm babies are at increased risk of poor outcomes and this can put enormous strain on the family. Objective This study aimed to test the hypothesis that giving birth preterm affects maternal health, mood and well-being, and alters women's feelings and ...

Effect of maternal age on the risk of preterm birth: A ...
adjustment problem for mothers of preterm infants. The significant impact of the infant's premature birth and the subsequent intensive care experience upon maternal adjustment was the focus of this study. The purpose of this study was to compare maternal adjustment at three months post-birth between mothers of term and preterm infants.

Maternal adjustment following preterm birth: Contributions ...
The birth of a preterm infant has been linked with parental distress and adjustment difficulties, yet little is known about the psychosocial factors contributing to this association. Using a cross-sectional design, we therefore examined maternal adjustment following preterm birth, with an emphasis on the potential role of experiential avoidance.

Effects of Maternal Age and Age-Specific Preterm Birth ...
A number of factors have been identified that are linked to a higher risk of a preterm birth such as being less than 18 years of age. Maternal height and weight can play a role. Further, in the U.S. and the UK, black women have preterm birth rates of 15-18%, more than double than that of the white population. Many Black women have higher preterm birth rates due to multiple factors but the ...

Preterm birth - Wikipedia
Exploring the relationship between maternal age and birth outcomes in MAR pregnancies is especially relevant, as studies that have examined this association have consistently shown that children conceived through MAR are at increased risk of adverse birth outcomes, such as low birth weight (LBW) or preterm birth (Hansen et al., 2005; Sutcliffe and Ludwig, 2007; Wilson et al., 2011; Pandey et al., 2012; Hart and Norman, 2013).

Maternal dyslipidemia and risk for preterm birth
Findings to date suggest that maternal stress may be influenced by a range of factors spanning infant, maternal, and family social background characteristics. 2 These include the severity of infant illness, 1, 11 pregnancy planning and previous pregnancy loss, 1 maternal trait anxiety and mental health history, 11, 12 exposure to other stressful life events, 13 maternal education, 14 and ...

Maternal Factors and Complications of Preterm Birth ...
The birth of a preterm infant has been linked with parental distress and adjustment difficulties, yet little is known about the psychosocial factors contributing to this association.

Maternal Adjustment To Premature Birth
Confounders found to have the greatest impact were placenta praevia, hypertensive complications, and maternal medical history. Conclusion Even after adjustment for confounders, advanced maternal age (40 years and over) was associated with preterm birth. A maternal age of 30-34 years was associated with the lowest risk of prematurity.

Impact of preterm birth on maternal well-being and women's ...
The purpose of this study was to ascertain whether the adjustment for primiparous mothers of preterm infants was less positive than for primiparous mothers of term infants utilizing the Roy Adaptation Model as a conceptual framework. This secondary analysis utilized data from a larger longitudinal study. The data was collected at three months post birth in the homes of the mothers.

Advanced maternal age makes preterm birth more likely: Study
Maternal stress during pregnancy was more common among women who gave birth preterm compared to women who gave birth at term (p <0.000, AOR 2.15 (CI = 1.18-3.92)). Among the women who experienced stress during pregnancy 54 % gave birth preterm with stress as an attributable risk factor. Among all of the women the percentage was 23 %.

*Maternal Adjustment to Premature Birth: Utilizing the Roy ...
The estimated societal cost per preterm birth includes medical care for premature children, maternal delivery costs, early intervention services, special education services and lost productivity.
