?linoptilolite-containing tuffs as ion-exchangers play an important role in water decontamination. The shortest scientifically grounded way to determine the optimal conditions or to forecast the results of ion-exchange processes lies in the mathematical modeling of both sorption and regeneration stages. The theory of the ion-exchange dynamics has been developed and used for modeling and ...

Using Mathematical Models to Solve Problems - Video ...

Mathematical models can project how infectious diseases progress to show the likely outcome of an epidemic and help inform public health interventions. Models use basic assumptions or collected statistics along with mathematics to find parameters for various infectious diseases and use those parameters to calculate the effects of different interventions, like mass vaccination programmes. The modelling can help decide which intervention/s to avoid and which to trial, or can predict ...
