Following the philosophy of the steepest gradient method, we found a significant change in resistivity computed on an averaged depth resistivity function of the ERT data. Accordingly, we classify two distinct units: a) an upper unit, with resistivity > 75 m, which we assigned to the coarse waste...

I have owned this book since I took my first undergraduate mathematical physics course in 1972. Since that time, however, I have not really found Mathews and Walker to be terribly useful. My problem is that it is difficult for me to learn to use mathematical methods if they are presented without proof.
