pineal gland | Definition, Location, Function, & Disorders ...
Rhythmic production of melatonin by the mammalian pineal occurs in response to noradrenergic stimulation which produces a cascade of biochemical events within the pinealocyte. In the rat, massive changes in NAT activity result from an increase in intracellular c-AMP levels produced by a synergistic interaction whereby an α_1 activation amplifies α_1 -adrenergic stimulation.

The central role of the pineal gland and its hormone melatonin (MEL) in mammalian photoperiodic responses is discussed in terms of: 1) evidence for the involvement of MEL in photoperiodism, 2) which feature of the MEL secretion profile might be most important for regulating photoperiodic responses, 3) evidence for the modulation of responses to changes in daylength based on previous photoperiod exposure (i.e., photoperiodic history) and 4) how the MEL signal might be processed at its target ...

Melatonin biosynthesis in the mammalian pineal gland ... Recognition that the mammalian pineal is a gland and that melatonin, its product, is a hormone came to endocrinology relatively late (Wurtman et al., 1963a). For much of the 20th century the mammalian pineal was generally dismissed by scientists as a “ vestige, ” a functioning third eye in certain lower vertebrates but only a calcified remnant in humans (Kitay and Altschule, 1954).

The pineal gland is a small endocrine gland in the brain of animals with backbones. The pineal gland produces melatonin, a serotonin-derived hormone which modulates sleep patterns in both circadian and seasonal cycles.
