That's your manual release. The tip of the broken one can be removed - I've done alot of them. Then you replace the valve with the updated style. Now this is the most common issue. If this doesn't work, the valve body needs to be resealed - but don't jump to that conclusion. The broken manual release valve is far more likely.

Mercury Quicksilver 893929A01 - Relief Valve  
I do not need the official Mercury troubleshooting instructions. I have those. I loosened the Manual Relief valve, which is necessary before attempting to manually tilt the outboard. My question is one of brute force. The outboard is 505 lbs, and manually tilting it looks to require a group effort.
