The friction head loss (feet H<sub>2</sub>O per 100 feet pipe) in straight plastic pipes made of PVC, PP, PE, PEH or similar - can be estimated from the table below.. Head losses are calculated for PVC pipe Schedule 40 by using the Hazen-Williams equation and the Hazen-Williams roughness constant  $c = 145$ . Note that minor loss in fittings must be added when calculating total head loss in a pipe line.

The chart below illustrates the Farris Series 2700 valve type numbering system. The type number is imprinted on the nameplate of every Farris Series 2700 valve and describes its construction and metallurgy. Valve types with numbers ending in “SP” are special valves. Example: 27DA23-120/SP.

## **Engineering Design Representation**

Slotted and Phillips screwdrivers work with metric screws, but you must use metric hex keys with metric hex socket screws. Also, Phillips, square, hex and Torx® drive screws are popular because there's less chance for the driver to slip out and scratch finish work. Hex head, like hex cap screws, require a wrench or socket.
