Injection (often referred to as a "shot" in US English, or a "jab" in UK English) is the act of putting a liquid, especially a drug, into a person's body using a needle (usually a hypodermic needle) and a syringe. Injection is a technique for delivering drugs by parenteral administration, that is, administration via a route other than through the digestive tract.

Injection (medicine) - Wikipedia

Hyperkalemia is defined as a serum potassium concentration greater than the upper limit of the normal range; the range in children and

infants is age-dependent, whereas the range for adults is approximately 3.5-5.

Tourniquets in orthopedic surgery - PubMed Central (PMC)

Guidelines for procedural sedation have been available since 1985 for dentists and pediatricians through their societies. [62, 63] They have since expanded to other specialties including emergency medicine. [] In October 2014, the American Society of Anesthesiologists (ASA) Committee on Standards and Practice Parameters recommended new guidelines for moderate sedation to guide various ...
