MFiber is processed from Miscanthus giganteus, a C-4 perennial crop grown in the Midwest. Our vertically integrated system allows us to work alongside our farmers from soil preparation and planting all the way through harvest and transportation. This enables us to produce a product packed full of integrity.

Miscanthus x giganteus (Miscanthus giganteus, Giant Miscanthus) is a highly productive, rhizomatous C4 perennial grass, originating from Asia. [9] It is a sterile (non-invasive) hybrid of M. sinensis and M. sacchariflorus, and grows to heights of more than 4 meters (12 feet) in one growing season (from the third season onwards).

Miscanthus - Wikipedia

Giant miscanthus (Miscanthus x giganteus Greef et Deu.) is a perennial, warm-season Asian grass with the C4 photosynthetic pathway. Miscanthus species have been used for forage and thatching in Japan for thousands of years, managed through burning and grazing in vast prairies similar to those managed by Native American tribes in the central United States (Stewart et al., 2009).

As I mention very frequently here at Mercola Healthy Pets, the pet food (feed) industry is always on the hunt for inexpensive, typically biologically inappropriate ingredients for their formulas. One of the most recent appears to be miscanthus grass, which is under evaluation as an "alternative fiber source" for use in processed pet food.
