Study Guide: Mitosis | Biology I

Mitosis is the process that a somatic cell divides into two daughter cells. It is an important process in normal organism development. Meiosis is the type of cell division by which germ cells (eggs and sperm) are produced. Meiosis involves a reduction in the amount of genetic material. Both types of cell division have similar phases: prophase, prometaphase, metaphase, anaphase and telophase.

Mitosis and Genetics Study Guide Answer Key

Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis.
