Moon Phases 2019 - Lunar Calendar - Time and Date
The brightest and largest object in our night sky, the Moon makes Earth a more livable planet by moderating our home planet's wobble on its axis, leading to a relatively stable climate. It also causes tides, creating a rhythm that has guided humans for thousands of years. The Moon was likely formed after a Mars-sized body collided with Earth.

Moon Guides | Moon Travel Guides

Moon, Earth 's sole natural satellite and nearest large celestial body. Known since prehistoric times, it is the brightest object in the sky after the Sun. It is designated by the symbol ☾. Its name in English, like that of Earth, is of Germanic and Old English derivation.
