In dentistry, the subepithelial connective tissue graft (SECT graft, and sometimes referred to simply as a connective tissue (CT) graft) is an oral and maxillofacial surgical procedure first described by Alan Edel in 1974. Currently, it is generally used to obtain root coverage following gingival recession, which was a later development by Burt Langer in the early 1980s.

Abfraction lesions: etiology, diagnosis, and treatment options

Introduction. Patients affected by dental wear often are treated only when their dentation becomes extremely compromised. However, when pathologies such as dental erosion, and/or parafunctional habits are not intercepted at an early stage, full mouth rehabilitations, mostly implementing crowns, are often considered.
