Human and chimp DNA is so similar because the two species are so closely related. Humans, chimps and bonobos descended from a single ancestor species that lived six or seven million years ago. As humans and chimps gradually evolved from a common ancestor, their DNA, passed from generation to generation, changed too.

Museum of Human Beings | Colin Sargent

"Museum of Human Beings" portrays Baptiste as a singularly brilliant, courageous, adventurer whose bete noire is that he is tormented by interior devils within his own spiritualist inner self. It is in the man's struggle with his inner self as well as the counsel the spirits offer that the shading of values is achieved in the book.

Museum of Human Beings

The Museum of Human Beings demonstrates how Native Americans were treated as sub-humans by Europeans, and for this reason it is an important work. Colin Sargent told his story well. However, as well-written as the book is, it's too depressing for me to want to re-read.
