Answers To Biozone Handouts

This means that natural selection favoured individuals with dark- coloured fur in these habitats; that is, more of the dark-coloured mice survived and reproduced. Since dark-coloured fur is caused by a different allele than light-coloured fur, this resulted in more dark-coloured mice being born in the next generation.

Mrs. Delaney's Science Site: 8th grade Science: Unit 6 ...

You are a bird hunting moths (both dark and light) that live on trees. As you capture the moths most easily visible against the tree surface, the moth populations change, illustrating the effects of natural selection.

Natural Selection Topic | Answers in Genesis
evolution by natural selection. Evolution by natural selection takes place over many, many generations. Evolution by natural selection leads to adaptation within a population. The term evolution by natural selection does not refer to individuals changing, only to changes in the frequency of adaptive characteristics in the population as a whole.
