We are talking about the trigonometric identities in particular to the Pythagorean identities for (\tan) and (\cot) of (θ) , and (\sec) and (cosec) . Here we are being asked to prove the identity $(\cot)^2 + 1 = (\operatorname{cosec})^2$. The trick there is to remember the original Pythagorean identity. Let me write that down to start with, $\sin^2 x + \cos^2 x = 1$, that is the original Pythagorean ...

From the instantaneous position $r = r(t)$, instantaneous meaning at an instant value of time t , the instantaneous velocity $v = v(t)$ and acceleration $a = a(t)$ have the general, coordinate-independent definitions; $v = \frac{dr}{dt}$, $a = \frac{dv}{dt}$. Notice that velocity always points in the direction of motion, in other words for a curved path it is the tangent vector. Loosely speaking, first order derivatives are related to ...
