### The Transfer of Drugs and Therapeutics Into ... - Pediatrics

Babies commonly have acid reflux, but most don't require treatment, such as Zantac. If they spit up after feedings but are gaining weight, sleeping well and aren't fussy, they're likely fine. However, babies who make a mess after feedings do need intervention.

### Diagnosis and Prevention of Iron Deficiency ... - Pediatrics

Many mothers are inappropriately advised to discontinue breastfeeding or avoid taking essential medications because of fears of adverse effects on their infants. This cautious approach may be useful in some cases, because only a small proportion of medications are contraindicated in breastfeeding mothers or associated with adverse effects on their infants.
