The brain is simply not an appropriate subject for psychological predicates, and making it so has serious consequences for both neuroscience and philosophy according to Bennett and Hacker. It leads us down dead ends and makes research difficult, if not futile.

Philosophy of Mind - an overview | ScienceDirect Topics

In a recent podcast, neurosurgeon Michael Egnor talked with Robert J. Marks about the mind and its relationship to the brain and about different theories as to how the mind works. They talked about eliminative theories (the mind doesn't really exist) and emergent theories (the mind arises from matter) earlier and then the conversation turned to dualism:
