Neutrino

A neutrino (/ˈnuːˈtriːnoʊ/ or /njuːˈtriːnoʊ/) (denoted by the Greek letter ν) is a fermion (an elementary particle with spin of 1⁄2) that interacts only via the weak subatomic force and gravity.

What is a neutrino? - Scientific American

Definition of neutrino : an uncharged elementary particle that is believed to have a very small mass, that has any of three forms, and that interacts only rarely with other particles Other Words from neutrino Example Sentences Learn More about neutrino Keep scrolling for more

Neutrino - definition of neutrino by The Free Dictionary

Neutrinos are one of the fundamental particles which make up the universe. They are also one of the least understood. Neutrinos are similar to the more familiar electron, with one crucial difference: neutrinos do not carry electric charge.

Neutrino | Definition of Neutrino by Merriam-Webster

Neutrinos are subatomic particles produced by the decay of radioactive elements and are elementary particles that lack an electric charge, or, as F. Reines would say, "...the most tiny quantity of reality ever imagined by a human being". "The name neutrino was coined by Enrico Fermi as a word play on neutrone, the Italian name of the neutron."

Neutrino | physics | Britannica

A neutrino is a subatomic particle that is very similar to an electron, but has no electrical charge and a very small mass, which might even be zero. Neutrinos are one of the most abundant...

What's a Neutrino? - psuci.edu

The neutrino is an elementary particle that holds no electrical charge, travels at nearly the speed of light, and passes through ordinary matter with virtually no interaction. Neutrinos are created as part of radioactive decay.

Neutrino - definition of a neutrino

The electron neutrino (a lepton) was first postulated in 1930 by Wolfgang Pauli to explain why the electrons in beta decay were not emitted with the full reaction energy of the nuclear transition. The apparent violation of conservation of energy and momentum was most easily avoided by postulating another particle.

All About Neutrinos - IceCube Neutrino Observatory

Any of three electrically neutral leptons (the electron neutrino, muon neutrino and tau neutrino—one in each of the three generations of elementary fermions) that have small or very small masses.

Neutrino - Wikipedia

Neutrino, elementary subatomic particle with no electric charge, very little mass, and 1⁄2 unit of spin. Neutrinos belong to the family of particles called leptons, which are not subject to the strong force. Rather, neutrinos are subject to the weak force that underlies certain processes of radioactive decay.
