### **How to Use Nmap to Scan for Open Ports {Updated 2021}**

What many people don't realize is that Nmap is the perfect tool for a network IP audit. So let's use some Nmap commands and begin the process of discovering

all the servers behind the network. Here, we're going to skip all port scans, using an option called "skip port scan":

#### 7 BEST Advanced Online Port Scanners In 2021

nmap command. In addition, to above commands one can use the nmap command which is an open source tool for network exploration and security auditing. We are going to use nmap to find and list open ports in Linux: `$ sudo nmap -sT -O localhost` `$ sudo nmap -sU -O 192.168.2.254` `##[ list open UDP ports ]##`

#### nmap(1) - Linux man page

To scan Nmap ports on a remote system, enter the following in the terminal: `sudo nmap 192.168.0.1`. Replace the IP address with the IP address of the system you're testing. This is the basic format for Nmap, and it will return information about the ports on that system.. In addition to scanning by IP address, you can also use the following commands to specify a target:
